

# **Accessible E-commerce Website for Visually Impaired Users**

using HTML/CSS/JS, Springboot and MySQL

# Introduction

The “Accessible E-Commerce Website for Visually Impaired Users” is a measure towards developing an environment that is conducive to visually impaired users in purchasing products online. Some of its key components are a safe login and registration mechanism, coupled with easy-to-use navigation and search options for products, as well a simple-to-navigate cart page. The payment modes will also entail net banking and cash on delivery to accommodate all the users’ types. The ball is, therefore, on the users and this project to ensure that every visually impaired person gets to enjoy seamless empowering e-commerce experience.

# Abstract

- ❖ This project shall contain a simple login and sign up system through which the customers can log in securely.
- ❖ Customers are able to smoothly navigate the products available and easily look for products by type they are interested in.
- ❖ They use a simple cart page on the platform and allowing customers to pay through combinations of their preferred net banking systems as well as cash on delivery.
- ❖ For administrative control an admin page containing logs of the user activity is important.
- ❖ The intended purpose of this project is to improve the general accessibility and guarantee that e-commerce is stable and helpful for visually impaired client

# Objective

Expand the accessibility to design the e-commerce site that will be usable by blind people. This will involve using a company known as Secure Authentication to incorporate perfect system for users' login and sign up experience. Effectively enable the users to filter product easy through categories. Extended capabilities for searching enable the users to find the necessary products according to their choice. Voice control for Visually Impaired customers to access the whole website.

# Existing system and proposed system

## **Existing System:**

Although the presented current e-commerce platforms do not have the devoted accessibility features for visually impaired users, it is clear that the shopping experience of such customers is not comfortable enough. Then there is always a problem with the layout of the page not being compliant, screen readers not being used or being very weak, and the user interface is complicated. Moreover, there is lack of accessibility of more senior users since the processes of authentication and product search options are not developed for blind people. For sellers and administrators, the platform is limited in the control of products and supervision of users' activity when there are no Inclusive design concepts employed.

# Existing system and proposed system

## **Proposed System:**

The concern is handled in the “Accessible E-Commerce Website for Visually Impaired Users,” which integrates complex accessibility features and intuitive interface for visually impaired consumers through voice commands. This level guarantees that all tasks related to authentication are safe and easy; the product offers optimized navigation by categories; the search function is effective and can be adjusted in accordance with the user’s interests. The shopping experience gets even better on the cart page and there are numerous payment methods cash on delivery. The system has special sections for the administration to observe user and product actions and for the sellers to regulate the products they offer.

# Hardware and software requirements

## Hardware Requirements:

- Processor: Dual-Core Processor
- RAM: It has storage of 8 GB or higher.
- Storage: At least 100 GB.
- Network: High-speed internet connection

## Software Requirements:

- Web Server: Apache Tomcat.
- Browser: Chrome or any other browsers
- Database: MySQL 8.0 or higher
- Java Development Kit (JDK): Early versionsjdk or JDK 21 or any higher version
- Framework: Spring Boot 2.5 or higher

# Table Design

# Testing Methodologies

- ❖ **Unit Testing (JUnit)** – applies for using JUnit for the test of such objects as controllers, services, repositories.
- ❖ **Integration Testing (Spring Boot Test)** - It includes core items; Spring Boot Test Auto-Configure is used for auto test configuration.
- ❖ **Integration testing (JUnit, Spring Boot Test)**

# Research Methodology

- ❖ Enhance Accessibility
- ❖ Secure Authentication
- ❖ Comprehensive Search
- ❖ Admin Control
- ❖ Server: Apache Tomcat
- ❖ Voice Recognition: Voice based navigation for customer using javascript

# Conclusion

The proposed “Accessible E-Commerce Website for Visually Impaired Users” is the way to build an equal online shopping sphere. Focusing on the needs of the target audience of visually impaired users, this project guarantees a comfortable and convenient choice of navigation, product search, and purchase. Implementing secured means of logging in and out of the platform, simplified ways through which customers can browse through the products, effective search bar and multiple methods of payment makes the experience enjoyable. Further, the separate modules for administrators and sellers help to control the activities of users and products easily. With this tackling, we are seeking to close the gap of disability when shopping online for the visually impaired users.

# Future Enhancement

- ❖ **Superior Voice Recognition:** Incorporate Natural Language Processing into it the to enhance the comprehension of the users' commands.
- ❖ **Adaptive Design:** Make sure the platform is fully 'mobile friendly' and is easily viewable on tablets and smartphones.
- ❖ **Advanced Encryption:** Ensure that users' data are and their transactions are encrypted using the most sophisticated methods that are available.
- ❖ **Net Banking:** Add the options like GPay, PayTM and PhonePe for payments.
- ❖ **Search Bar** (Autocomplete and Suggestions): This is a Search Bar contained within the application, whose purpose is to include autocompletion and suggestion fields when the user is searching for a particular item.
